

# CENTURY EXTRUSION

*Your Partner in Productivity*

## Extruder Gearbox

Gearboxes from Century Extrusion assure the uptime of your manufacturing line. Stated simply, our gearboxes are the most robust and flexible systems available.

### **Extreme Duty from Century**

Superior engineering design and durable construction yield long-lasting gearboxes—with a lifetime of up to 50,000 hours—used in all Century Extrusion machinery. Higher-rated torque and safety factors make the gearboxes extremely reliable, resulting in less downtime.

### **Balanced Distribution of Power**

The unique gearbox design—balanced distribution of power for optimal gear loading—strengthens the heart of Century Extrusion machinery. Changeovers in gear ratios can also be done easily and efficiently.

## Extended Gearbox Warranty

We are certain of the success and long life of our gearboxes. That's why your investment is protected with our 24-month warranty—twice as long as most warranties offered in our industry.

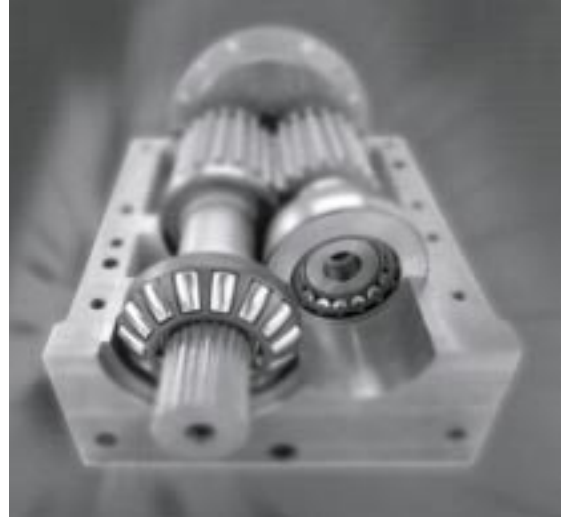

## Key Durability Features

- Forced lubrication on thrust bearings, upper distribution shafts and bearings, input shaft and gearing.
- Same gearbox platform (housing, bearings, seals, shafts) for standard and high speed/high torque design – only need to change the gearset, an easy changeover between the two.

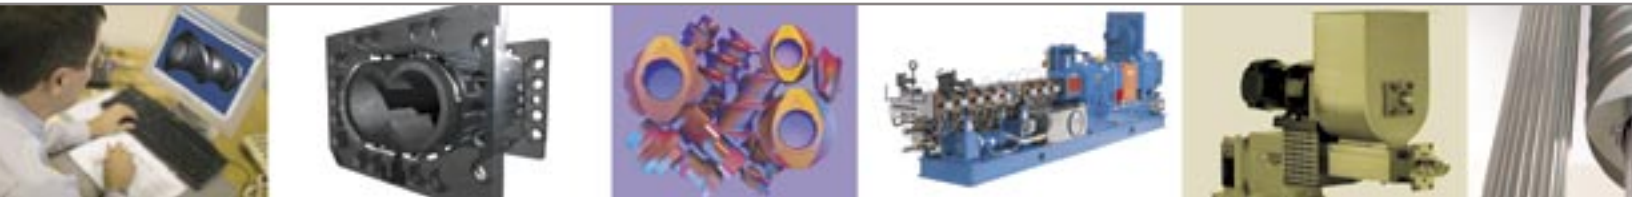

## Service Centers

Seals can be serviced without removing the gearbox, but when needed, service is a simple domestic phone call away. Gearboxes can be serviced in Europe and North America.

## Our Commitment

Century Extrusion understands the unique challenges that processors face. We work continually on the development of new technologies that enable companies to increase their productivity and business success.
